

FOR IMMEDIATE RELEASE:

CompactCath first public demo at AARP Innovation@50+ EXPO
Palo Alto, CA, April 30, 2014

CompactCath is a revolutionary urinary catheter that could drastically change the lives of people who self catheterize. Now, for the first time, the general public can touch and see CompactCath at the AARP Life@50+ Expo in Boston, on May 8-10th, 2014.

Founded in 2011 and alumni of Stanford StartX-Med accelerator, CompactCath is already expecting FDA clearance in summer, 2014. Most recently, CompactCath has issued two patents and closed a second seed funding from Stanford fund among other angel investors.

CompactCath's compact packaging, pre-lubrication and easy disposal mechanism ease the lives of those who self-catheterize daily, eliminating the inconvenience of carrying, concealing, and disposing of traditional catheters.

Prospective users will be able to see the CompactCath product, talk to the Co-founders, and evaluate the product's impact for themselves at the AARP Life@50+ Expo. CompactCath's innovation is offering a solution to bladder health issues that many men and women in the aging population are facing. The product is equally suitable to all individuals of all ages.

The national AARP Life@50+ Expo targets the aging community with pavilions in health technology, home, leisure, fitness, and more.

CompactCath was founded by group of physicians, engineers and business people, and developed in cooperation with doctors, nurses and patients.
